New Directions in Rhododendron Development.

Dr. Stephen Krebs, Director, David G. Leach Research Station, Holden Arboretum, will speak on his interest in increasing the popular appeal of new introductions of rhododendrons and azaleas by adding disease resistance and heat tolerance to them. These traits may improve their performance under challenging conditions and broaden their marketability to regions where rhododendrons currently have a limited presence.

Location: Vineland Research & Innovation Centre, Rittenhouse Hall, Victoria Avenue, Vineland Station.
